A car navigation device installed in a vehicle receives and stores a content, such as a navigation guidance route, from a server in a communication network. The car navigation device receives a request from the vehicle to receive an exchange content from the server, and transmits a request for exchange content to the server. In response to the request from the car navigation device, the server transmits the exchange content to the car navigation device. Then, the car navigation device transmits the exchange content to the vehicle. In this way, the exchange content can be received and stored in the vehicle.
