I am trying to find all strings that have a certain length and does not have leading numbers. So I wrote this UDF: func IsLong(text string) (result bool, err error) { result, err = regexp.MatchString(`^\d+`, text) if!result { return false, err } return true, nil } It does what I want, but I want to remove the leading digits. If I run this, I want to get: {"123":true, "1025":false,

"1026":true} And I have this: {"123":true, "1025":false, "1026":true} I have read that it's a regexp problem, but I can't figure out how to solve it. A: In your UDF, since you do not want to use any regular expressions in the match, you can use the return value of the regexp package, which is a non-zero value to indicate whether the expression matched. You can use this to modify the input text before calling the regexp package. Example package main import ( "fmt" "regexp" ) func IsLong(text string) (result bool, err error) { text = strings.TrimPrefix(text, "0") result, err = regexp.MatchString(`^\d+`, text) if result == false { return false, err } return true ca3bfb1094

### What's New in the AutoCAD?

Enhancements to the selection panel: Selection tools now support custom sliders and range handles, and you can use a more intuitive and visual selection panel. (video: 2:09 min.) Export and Publish Enhancements: Publisher now supports AutoCAD drawings saved in 4, 16, and 32 bit floating point format, while the native output format of the chosen destination application is preserved. AutoLISP exports have also been updated to include more supported file formats and selected files can be exported on a "per drawing" basis. Publish enhancements include a new publication-based import tool for reducing the amount of objects stored in the database. (video: 1:28 min.) Online Training Enhancements: Mockups have been updated to use the same Canvas Editor improvements that are found in the 2018 versions of AutoCAD. All existing and new online courses have been updated to include these changes. FEATURE SUMMARY Markup Import and Markup Assist Introducing Markup Import and Markup Assist. This new feature enables you to import feedback from other 2D or 3D apps into your AutoCAD drawings, and instantly incorporate those changes into your designs. Get feedback from papers and PDFs in-place, add it to your drawings with a few clicks, and then automatically get it back into the drawing when you're ready. This is especially helpful when you need to incorporate the changes of a specific colleague or user into your own designs. Importing marks from external files is done via their EXE or other native executable file format, including JPG, PNG, or GIF. The import interface has been redesigned for more intuitive use. You can add multiple items at once and access them all quickly and easily. Selective Import has been enhanced, allowing you to import different comments or marks for different drawing objects. You can also filter the Import dialog so that you only import comments and marks that are relevant to the drawing objects currently selected in the drawing. Finally, marks and comments can now be added with their original properties intact, so you can see them in their original form. Selection Tools: Selections can now be created directly in the Drawing window, using the Select option in the Geometry panel, for better placement accuracy. Selection tool drawing handles have been improved to display as rounded rectangles with the highlight shaded. This gives you a more

## System Requirements For AutoCAD:

In order to play GWAR, you must have an Intel Pentium 4 processor running at 1.4 GHz or faster, or a AMD Athlon Processor at 3.0 GHz or faster. You also need a 32-bit operating system. A Pentium 4 or AMD Athlon Processor is not required. You can play on systems that use a Pentium 3 or Pentium Pro Processor, but your performance will be reduced. You should also have a current copy of the game, which is available here: The
