An Organic Solid-State Battery with a N2200 Organic Perovskite Cathode Material. The first demonstration of an organic solid-state battery is reported in this work, showing excellent features such as the use of a highly conductive carbon cathode, a stable electrolyte including an organic solvent, and a sustainable high-molecular weight organic cathode material. The performance characteristics of an organic solid-state battery comprising the organic cathode material with a molar extinction coefficient of $6 \times 10^{14} \text{ cm}^{-1} \text{ m}^{-1}$, average thickness of $\sim 3 \mu\text{m}$, and 1 m-thick active cathode film are evaluated and are compared to those obtained from a traditional organic thin-film battery. The organic solid-state battery shows improved charge/discharge capacity and rate capability. It can deliver 909 mA h g⁻¹ at 0.3 A g⁻¹, the highest value obtained among reported materials.Q:
