. lit download of Powerpoint presentation at the WEF " - in the rat.s-chroedor/2013/04/24/schritte-zur-soziologischen-theorie-neu-download/. Category:German words and phrases Category:Philosophy  
References SourcesQ: Why won't the refracture trigger in the first Lightwave project I work on? I have been trying to get a refracture to work since I first started working with lightwave a few weeks back but it is not working. The warning I got is: FW Image Data Missing Details: There are no frames. No frames are currently defined. The image data is currently empty. I can't find a frame here. I tried putting the refracture into its own layer and then applying that layer as a tracker plane and it doesn't work (I still get the same error). This project is a 3d cube model that I imported into Lightwave from a.blend file. EDIT: I added the plane I created using custom instructions from this tutorial. A: If you open the LWL file, you should see a set of instructions for how the refracture behaves. There's something about it that's not working the way they say to do it. You may want to ask a more specific question about how your frame is implemented, but it sounds like you need to find a tutorial that explains how to use them. Archaeological investigations in the Iberian Peninsula have brought to light several sites of great importance in the history of ancient metallurgy, with the finds exhibiting remarkable examples of the production and use of copper in Spain and Portugal. They are: 1. At Aspero. Found near Almería, this town is the site of an ancient settlement dating back to the 3rd millennium BCE, on top of which was built a large, well-preserved, sprawling structure where works on metallurgy were carried out. This settlement was destroyed by the Romans when they invaded Spain, though little traces of the works at Aspero remain. However, Roman coins were discovered in Aspero, suggesting that this area was not only a metallurgical hub but that it was also used as a military base. Although the dating of Aspero's copper remains is highly uncertain, there 1cdb3666d

Category:Buddhist philosophical concepts Category:Buddhism in China Category:Religious concepts Category:Buddhist terminologyQ: Can't access a particular field in Django REST Framework response I have a Django REST Framework model like this: class User(models.Model): first\_name = models.CharField(max\_length=100) last\_name = models.CharField(max\_length=100) which I'm trying to serialize using Django REST Framework like this: class UserSerializer(serializers.ModelSerializer): class Meta: model = User fields = ('id', 'first\_name', 'last\_name') And it works as expected, I'm able to get the data from the database. If I add another field, let's say email, I get the following result: { "data": { "id": 1, "first\_name": "TEST", "last\_name": "TEST", "email": "email" } } As you can see the email field is not serialized. Is there something I'm missing? A: In your view, you are returning serializer.data, but in your serializer, you are returning serializer.data.email. Try changing your views to: def UserView(request): return Response({ 'data': serializer.data }) Nearly half of workers in the tech industry were faced with sexual harassment in 2016, according to a new report. Tech workers in IT, engineering, product design, and other similar industries were 8 percent more likely to experience sexual harassment than a general workforce, according to a new study by the American Civil Liberties Union. The study is based on the results of a survey of 2,100 tech workers with responses from workers in the Bay Area, Boston, Chicago, and New York City. The study says that tech companies are at the forefront

A: Using Processing I'd suggest something like the following: `var step = 0; function draw() { background(0); if (step % 2 == 0) { ...draw steps of weirdness } else { ...draw steps of balance } step++; if (step >= 7) { stop(); } }` The draw() function is called every frame. Each time the if-statement is executed, it steps to the next value of step. The if-statement generates steps of balance and steps of weirdness (a random animation, like squares moving around on a grid). When step is seven, stop() is called and you don't draw anything. . Given the negative or unclear evidence, it is possible that many of the included studies reported a higher consumption of fruit and vegetables. Third, the vast majority of the included studies were conducted with adult populations and the only study that assessed consumption among children was based on self-reported consumption. Studies conducted among children may be more reliable in assessing consumption than those performed among adults, as children may be less likely to be able to recall previous consumption than adults. However, self-reported consumption is still subject to recall bias and can be affected by social desirability and selection bias \[@CR80\]. Another limitation is that since we considered only studies from Australia, Asia, Europe and North America, conclusions regarding consumption in the remaining countries may be different. Future research should assess dietary intake using common methods and units across the globe to minimize inconsistencies between studies. The lack of optimal dietary assessment methods in many developing countries also should be taken into consideration \[@CR81\]. Conclusions {#Sec13} ===== This study indicates that the median fruit and vegetable consumption in the population is lower than the WHO recommendations, and that intake is especially low in children, men and in individuals from low income households. Consumption levels are also decreasing in a time-related manner over the past decade in most countries, with less pronounced changes in Japan. Considering the benefits of fruits and vegetables for reducing chronic disease risk factors, it is essential to build a robust evidence base for their prevention and control. The continuous consumption of fruits and vegetables should be increased in all population groups. Electronic supplementary material ===== {#Sec14}
