History AutoCAD is a licensed product and has been developed continuously since its inception. The company's first AutoCAD product was AutoCAD — in development from 1978 to 1982. The name AutoCAD was registered by the company in November 1980, which was used on the first official release of AutoCAD in December 1982. The first version of AutoCAD was released for the Apple II computer. According to Paul Miikoudis, the chief architect of AutoCAD, the first AutoCAD release was a trade secret, but the first public release was February 12, 1983. Autodesk described AutoCAD 2.0 as "a true revolution" in technology at that time. In June, 1997, AutoCAD — the DOS and Macintosh version was released. The Windows version of AutoCAD — version 14 (AutoCAD — Windows), was released on December 5, 1998. AutoCAD — 2012 (AutoCAD — Windows), was released for the first time on Windows NT computers. AutoCAD — 2012 (AutoCAD — Windows) was the last version of AutoCAD before the introduction of AutoCAD LT. Autodesk is the owner of the AutoCAD trademark. In 2007, Autodesk sued Imagen Labs, a competing CAD software company, for trademark infringement in the United States District Court for the Northern District of California. The company later agreed to dismiss the suit. Version numbers AutoCAD is continuously being developed, and new versions are released every year. Unlike other software applications that come in a new version each year, Autodesk uses version numbers to distinguish between different releases. Therefore, a new release is sometimes referred to as an "update". To distinguish between two identical versions of AutoCAD, the version number is expressed in a form of a decimals and the first number is expressed in "odd" and the second number is expressed in "even" where "odd" number is a part of "release number" and "even" number is a part of "version number". Therefore, a new release is indicated by the following example: Autodesk AutoCAD — version 5.4 (released in December 2015). Updates Unlike other software applications that release a new version each year, Autodesk uses version numbers to distinguish between different releases. Hence, when

Viral growth on cell-culture {#Sec20} Cell-culture infectivity titers (CCIT) were determined using the Madin Darby canine kidney (MDCK) cells. The MDCK cell monolayers were cultivated in DMEM medium (high glucose) (HyClone, Logan, UT, USA) supplemented with 5% fetal bovine serum (PAA, Pasching, Austria) at 37 °C in a humidified atmosphere with 5% CO_2. The supernatants of infected cells were harvested at the indicated time points, centrifuged at 18,000×g for 10 min at 4 °C and stored at −70 °C until titration. All experiments were performed in BSL-2. ca3bfb1094

The treatment of patients with malignant oral tumors often includes various forms of surgical intervention, some of which are combined with adjuvant modalities. Over the past 20 years, the role of surgery in the management of oral cancer has changed and become more conservative. This article describes various procedures for the removal of oral tumors. Keywords: Surgical management, Malignant, Oral, Tumors. Surgical management of malignant oral tumors often involves various forms of surgical intervention, some of which are combined with adjuvant modalities. Over the past 20 years, the role of surgery in the management of oral cancer has changed and become more conservative. The primary aim of the article is to provide a comprehensive approach to the surgical management of malignant oral tumors, taking into consideration the complex interactions between oral cancer and the host immune system. The concept of surgery for the removal of malignant tumors should be a multidisciplinary approach, which includes the availability of the surgeons with expertise in oncologic surgery. The choice of surgical intervention depends on the size and location of the tumor, the grade and stage of the disease, and the type of tumor (primary or recurrent). The type of surgical procedure to be used should be chosen according to the type of lesion (eg, soft tissue lesion, bone lesion), the stage of the disease, the availability of reconstructive techniques, and the estimated morbidity of each procedure. The aim of surgical resection is to remove the entire lesion with the purpose of achieving a definitive cure, as well as to control local or systemic disease and to restore or preserve function. Over the past 20 years, the surgical management of oral cancer has changed and become more conservative. Various types of surgical interventions can be used to manage oral tumors, and these are all associated with varying morbidity. Other interventions such as excisional surgery, chemoradiotherapy, and organ preservation can be used. Excisional surgery is based on clear margins and
