
CHScanner Crack PC/Windows

CHScanner Crack Free Download is a network activity collector and scanner for Windows hosts on the local network. It uses the Windows Management Instrumentation (WMI) framework to enable the user to perform a series of tasks on the host that they have selected. CHScanner Crack has a set of helper classes and functions that makes performing tasks against any target host is very easy. CHScanner Full Crack can perform several actions against hosts on the local network and access to the selected host is enabled using the OpenDevice method of the WMI class win32_devicecollection. CHScanner 2022 Crack can operate in two modes: scanning mode and working mode. In scanning mode, CHScanner For Windows 10 Crack listens on the specified port for the packets. When the packets are received, the information of the packets is saved to the defined data file. In working mode, CHScanner Download With Full Crack starts to send packets on the specified port, and waits until all the specified packets have been sent. Once all the packets have been sent, then CHScanner Download With Full Crack pauses. In this working mode, CHScanner will not open a port. CHScanner is running in the background and you can open another application while CHScanner is running. Once CHScanner's working mode is ended, the program will be closed. CHScanner includes the following features: -List open TCP/UDP/ICMP ports -Open TCP/UDP/ICMP ports using ARP spoofing -Scan IP subnets and find open TCP/UDP/ICMP ports -Switch from one network interface card to the other -Ping hosts and find their hostnames -Ping hosts and find their IP addresses -Ping hosts and find their operating systems -Turn on or off/shutdown or reboot a remote Windows host -Ping hosts and find their TCP ports -Ping hosts and find their ping sweep packets -Find Ethernet broadcast addresses -Wake-on-LAN (WoL) -SNMP -Windows Management Instrumentation (the Microsoft implementation of WBEM) CHScanner is available in English and Chinese. A graphical and scriptable network activity monitoring application for Microsoft Windows. NetMon is a simple network diagnostic tool. It allows users to monitor the network and perform network activity tests. NetMon listens on specific ports to receive packets. It then displays the contents of these packets in a console window and allows a user to perform actions against the host from which the packet was received. NetMon includes the following features: -List

CHScanner is an open source network scanner written in C#.NET using Mono to interface with a Microsoft Windows host (programs know WMI for Windows Management Instrumentation, an MS-DOS "programmer") to get information about the host network and the host itself, including if the host is off-line, online and the version of Microsoft Windows installed on the host.
