The year 2017 has quite a bit of interesting changes and innovations. Both Microsoft and Apple in their revisions of respective Office 2013 apps for iOS devices have had some rather exciting releases. With the launch of Windows 10, the Office apps have seen a good deal of new and useful updates. For iPad, there are no updates for that version, but the big focus this year has been on the Apple Pencil. We will cover the important Microsoft Office updates first and then with the Apple Pencil. We will only single out the most productive or most interesting updates. Before we get to the new and interesting features, let's go over some important changes and new features to both programs. While Microsoft PowerPoint is a major competitor to Apple's Keynote application, Microsoft has not updated it for the iPad for some time now. Microsoft has offered powerful semi-pro applications for the iPad in the past when it needed something to compete with Apple's Keynote in terms of quality and usability. The latest Office for iPad Pro is a much needed update. This new iPad version of Office for productivity is very elegant and sophisticated in its UI. In version 10.2 the display of PowerPoint is now a one-pane view. This is quite a bit different than the usual two-pane view. The previous two-pane view has been a good tool for PowerPoint for iPad users, but it has some flaws. The two-pane view opens up a new side panel to control your presentations. You can now simply tap on the slides you want to use to the two-pane view mode which will display slideshow controls on the right side. Another new benefit here, is that the left side panel is completely hidden as long as you are in the presentation slide view.

If you're working with large images, you might notice that optimizing Photoshop for CPU use becomes important when you have multiple windows open. When you are creating, you want to have a good product, but when you put your work on eBay as digital images, it's not possible to display a good quality at the time of the visibility. Although, I have the above mentioned knowledge, for a better visibility of your work, you need to make changes to the work early so you can keep working as well by taking into consideration the visibility. The same is also applicable to the digital editing work. If you scroll up the Photoshop is one of the big tools such as the popular Photoshop. One of the great things about Photoshop is that it has an interface that is loved by both beginners as well as seasoned professionals alike. As soon as you click the main menu, you are immediately welcomed to a very 'user-friendly' interface full of live previews, all accessible from the Quick tool, Tools, Features, and Web. You can do everything you expected to be able to do, but did not know how to do outside of Photoshop until after spending hours in front of Photoshop. Not only is Photoshop easy to use, it's extremely powerful. We've used Photoshop throughout the years for everything from images, drawings, and layout, to fashion, electronics, and animatics. No matter what you're creating for whatever reason, Photoshop will have the edge in more ways than you can imagine. No matter what type of project you are working on, Photoshop will get the job done. From baking a 3D scene with powerful layering, manual focus options (a thing you wouldn't have thought possible), high dynamic range (HDR) images, even blending live action motion graphics, Photoshop offers a photo editing solution for any industry in any creative department. Without a doubt, Photoshop is a leader in the imaging world. Photoshop is very powerful and flexible, especially in regards to its overall workflow. Photoshop offers many workflow and finishing options to extend its capabilities beyond just editing an image. From borrowing tools from other applications, using Photoshop's native GPU-powered programmable hardware to accomplish tasks in here that have been unrealized by traditional software, such as creating a gradient filter in seconds, you won't find anything else like in Photoshop.
