KeyMACRO is a simple macro manager that allows you to define complex, multi-step macros that are then triggered by a simple keystroke or mouse click. You can also associate any kind of commands with your macro to be triggered accordingly. You can also setup so-called "trigger-based macros". Trigger-based macros are a type of macro that allow you to trigger an action by something other than a keystroke. An example of a trigger-based macro would be to have a macro that will start recording your webcam activity by clicking the record button on a webcam control. Features: KeyMacro is not just another macro manager out there, it brings so many new features to the table that it will definitely make your workflow a lot smoother. KeyMacro is cross-platform KeyMacro works across all Windows platforms. The program comes in two versions; the full featured one that is licensed and a demo version that does not offer any further features but is fully functional. For this reason, the demo version may be more suitable for users that are looking for a free solution to their need. The full version of the program comes with a freeware license that allows you to use the software in both your personal and commercial environments. KeyMacro offers so many features KeyMacro supports a wide range of features that make it so much more useful. Some of the features you can use with this software are: Lists Another very useful feature that you can take advantage of is the lists feature. You can manage a list of projects, macros, macros with arguments, or even macros that are arguments, so you can have many different lists. Blending You can also set up complex macros that contain other macros within them, these are called blending macros. Blending macros allow you to record an action and trigger another action at the same time. For example, if you are trying to record a screencast of the window you are in, you can also set up a macro that would capture the keystrokes you are using, set the screen resolution, and start the screencast process at the same time. Variables The variables feature is a powerful tool that can help you organize your project in a variety of ways. You can use variables to create lists, create names for your macros, or even to take advantage of the randomization functions. Actions You can also set up 2edc1e01e8
