I'm not talking about photography. I have no idea what they mean by "Adobe and Windows" but the software can be installed on both Mac and Windows, so there's that. I have no idea what the deal is with the Mac version. I'm using a Mac and it's installed on a PC and I don't know how to change them. The Mac version cannot change the resolution of the photos. I'm not a tech, and I couldn't even fix my printer that was discontinued on the 29th of June. I don't know what exactly is happening. I need the Mac version, but I don't know what for. I really don't need it. Adobe has done a wonderful job on this one. I'm going to use a widget. I'm going to pray for this one. Basic operations are fine with this new interface, but dragging and masking features are now so sluggish that it's unusable.

I don't have any problem with the prices. It's a matter of product quality. They have a LONG way to go to bring their product up to the same standard of the industry, and guess what? You can see it when you use their product. Their product stinks, and they don't seem to care, at all. I will be back in the future as I do need their products and their prices are right. But for current users, I'm looking for the Wordpress book package. Sure, it replaces your current editor of choice (which, like yours, I highly recommend. And off-hand that I can think of is Apple: Final Cut Pro, Adobe, Avid, etc), but if you're interested in learning about post-processing, really, Lightroom is one of the better ones at it, and it's dead simple to get started with. The new software is still a ways off (it's called Photoshop 2019 for a reason), but in the meantime, it offers some nice improvements for users of those commonly used features (Image Effects, Exposure Corrections, etc).
