The new brushes offer more intelligent strategies and results, with greater control over the look and feel of the finished work, which empowers you to keep pushing the limits of what is possible. Press & Smudge is a new tool that provides both soft blending and shading on an image, which can be combined with the new creative blending options.

With the Image Adjustments panel open, you have access to the same controls as the tool window, plus the gear panel. If you click on the gear, you get a list of advanced options, such as advanced options, tone mapping, 3-D effects, and limited color controls. Turning on the Metadata panel gives you additional options to work with images based on the data they contain--a great way to identify a specific image and use its keywords to narrow your search. The image Adjustments window has a bunch of controls, too. On the right side of the window above the image you'll find tools for selecting, editing, and merging objects. On the left, you'll find the same type of controls as the tool window. You have a collection of individual controls (Brightness, Contrast, Saturation, and so on) that you use to adjust the appearance of pixels inside your image. You have another palette of controls (Brightness, Contrast, Saturation, and so on) for general adjustments to the entire image. Notification panels are used to alert you to the completion of actions or when a preset is available. Open the panel by clicking on the top of it. The Latest panel provides a list of the most recent actions you've performed. The Presets panel gives you a bunch of established tools and preset adjustments for the effect you're working on. The Action list is similar to the Presets panel, but there are additional options for applying actions to specific image regions. Select the darkest (black) and lightest (white) details in the image and drag them onto the Eye Dropper tool. Drag the brush to make additional selections. When you're done, choose an Eraser tool.
